

BPUD Xerces Western Monarch Count

Notes: regular checks important as weather shifts clusters and affects population; for official count protocol dictates training, early count and temperature range but mid-day observations help locate monarchs, note nectar plants favored

‡ 2022 early in TCount period 0 at BPUD and 0 at PG, but 1042 (Kale), 1012 (Alder), then frost in late Nov so when checked again, none at kale nor Alder but 1042 at BPUD and 53 at PG.
